

Table 1: Analyses of variance. When data points were available for both the early (T1) and late (T2) testings, only one testings was chosen randomly and included in the analysis. Five different randomizations were tested and the maximum and minimum F and p values are listed for each independent variable across the five randomizations. Separate analyses were conducted with (a) age at cochlear implantation and (b) age at onset of severe to profound hearing loss as independent factors.

Factor	Degrees of freedom	Max F	Min p	Min F	Max p
CI experience	5	15.61	0.000	12.75	0.000
(a) Age at CI	6	9.96	0.000	7.80	0.000
Duration of s/p HL	7	2.89	0.005	2.10	0.041
Etiology	14	1.96	0.017	1.25	0.230
Error	1823				
Total	1855				

Factor	Degrees of freedom	Max F	Min p	Min F	Max p
CI experience	5	20.67	0.000	12.03	0.000
(b) Age at onset of s/p HL	6	11.97	0.000	8.26	0.000
Duration of s/p HL	7	7.00	0.000	4.82	0.000
Etiology	14	1.84	0.028	1.70	0.050
Error	1823
